Subject: No network after instalation Posted by 7HLT on Fri, 26 May 2017 08:47:25 GMT View Forum Message <> Reply to Message

HEllo, I just installed OpenVZ from netinstall and it installed just fine, including connecting to internet and downloading all stuff. However, since first reboot, there is no internet access. When I look into console, I see only IP 10.37.130.2. According to ipconfig, it is on virbr0.

How to restore internet access? Thanks
