Subject: Restore Container from PLOOP Backup Posted by futureweb on Thu, 31 Aug 2017 16:52:18 GMT View Forum Message <> Reply to Message

Hey there,

because of Backup-Speed we do Ploop Level Backups of our Containers (as described here: https://openvz.org/Ploop/Backup) But what would be the right procedure to restore such Backups when needed? (we got the "root.hdd" Directory + ve.conf) Maybe someone here can help me on that? thx Andreas Schnederle-Wagner

## Anyone?

I would be interested in the reply as well.

Restore process should be like this:

- Create new container (or use same CTID if it's not already registered in system) and make sure it's stopped

- Copy in ploop file, replacing blank/existing (assuming it was snapshot properly prior to backup as described in wiki link you supplied)

- Start container

That typically does the trick.

Worst case if there's issues with that, you can create the new container, stop it, mount its ploop, mount the backup ploop and rsync the data over between the mounts.
