Subject: OpenVZ support for Multiple IPs in Slackware 9/10 - I have it working

Hi,

    I'm not sure if anyone is interested - there is no official Slackware 9
/ 10 caches (but http://wiki.openvz.org/Slackware_template_creation has an
easy method of creating them)... but the problem is the RC scripts provided
don't support multiple ips.   After some hacking, I have both OpenVZ
scripts/dists scripts and the /etc/rc scripts that will work for Slackware
9 & 10 that allows for multiple IP addresses. If there is any interest in
getting these put into openVZ, please let me know and I can provide them.
