Hi All,

```
prctl set myvm --vnc-mode manual --vnc-port 5901 --vnc-passwd pass
```

Result prctl start myvm:

```
prl_disp_service: 04-08 12:19:03.073 F /disp:1326:1534/ libvirt error internal error: qemu  
unexpectedly closed the monitor: 2018-04-08Z qemu-kvm: -vnc [::1]:5,websocket=5700,password:  
Failed to start VNC server: Failed to bind socket: Cannot assign requested address
```

```
[root@host downloads]# prctl list --info test
```

```
Remote display: mode=manual port=5905 address=0.0.0.0
```

```

assign requested address
```

Problem has been solved.

Do not disable IPv6 in sysctl!

```
net.ipv6.conf.all.disable_ipv6 = 1
```

```
net.ipv6.conf.default.disable_ipv6 = 1
```

To:

```
net.ipv6.conf.all.disable_ipv6 = 0
```

net.ipv6.conf.default.disable_ipv6 = 0

Tom
