Hey there,
just playing around a bit with OpenVZ 7 (latest) ... and was wondering if it's possible to run Virtuozzo 7 created Containers on OpenVZ 7?

When I tried it with a Test CT i got this Error:

```
[root@openvz7 private]# vzctl start 396
Starting Container ...
Container is mounted
Os release: 3.10.0-693.17.1.vz7.43.10
Failed to mount devtmpfs: No such file or directory
Container is unmounted
Failed to start the Container
```

thx, bye from Austria
Andreas Schnederle-Wagner

In general Vz7 and OpenVz7 uses the same packages, so we expect containers created on Vz7 should work correctly on OpenVz7.
And contrary: containers created on openVz7 should work well on Vz7.

If you still observe some troubles -- please submit bug into <https://bugs.openvz.org>

Thank you,
Vasily Averin

@vaverin - in that Case - any ideas what could cause the "Failed to mount devtmpfs: No such file or directory" Error when I try to start a Virtuozzo 7 Container on the OpenVZ Root Node?
Will also submit a Ticket tomorrow when I'm back in the Office.

Dear Andreas,

I'm not qualified in this area unfortunately.

May be something was wrong during its migration, so I think it makes sense to describe the migration procedure in more details.

Hope it helps developers to clarify the reason of this problem.
