I'm trying to do a yum update on openvz 7.07 new installation and I get the following error:
anybody knows how to fix this error?

Error: Package: libvzctl-7.0.479-1.vz7.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-driver-network-3.6.0-1.vz7.43.x86_64
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-driver-nwfilter-3.6.0-1.vz7.43.x86_64
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-3.6.0-1.vz7.43.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-driver-lxc-3.6.0-1.vz7.43.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-libs-3.6.0-1.vz7.43.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
You could try using --skip-broken to work around the problem
You could try running: rpm -Va --nofiles --nodigest

Same here with a standard production installation.

Error: Package: libvzctl-7.0.479-1.vz7.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-driver-network-3.6.0-1.vz7.43.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-driver-nwfilter-3.6.0-1.vz7.43.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-3.6.0-1.vz7.43.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-daemon-driver-lxc-3.6.0-1.vz7.43.x86_64 (factory)
Requires: libdbus-1.so.3(LIBDBUS_1_3)(64bit)
Error: Package: libvirt-libs-3.6.0-1.vz7.43.x86_64 (factory)

Same issue here, clean installation done with previous version.

I've downloaded the latest release `openvz-iso-7.0.8-138.iso` (factory) at
https://download.openvz.org/virtuozzo/factory/x86_64/iso/

Clearly some packages are missing from the repo.

```
dbus.x86_64 1:1.10.24-7.vl7 / dbus-1.10.24-7.vl7.x86_64.rpm  
dbus-libs.x86_64 1:1.10.24-7.vl7 / dbus-libs-1.10.24-7.vl7.x86_64.rpm
```

Have installed them from the ISO and now yum update works like it should.

* have notified Virtuozzo support team about this, they are going to take a look at repo correction.

Thanks Alenco,

I will wait for the fix.

Tom

is this issue related "factory repo enabled by default"?

<https://forum.openvz.org/index.php?t=msg&th=13492&st=art=0&S=f6a34abb70a0a1213dbec4dc2f22487b>

These repositories are for internal use by developers only
Enable them on your own risk!!!

```
[factory]
name=Build Factory packages for Containers
mirrorlist=http://download.openvz.org/virtuozzo/mirrorlists/7.0/factory-os.mirrorlist
#baseurl=http://download.openvz.org/virtuozzo/factory/x86_64/os/
priority=49
enabled=1
gpgcheck=1
gpgkey=file:///etc/pki/rpm-gpg/RPM-GPG-KEY-Virtuozzo-7
```

```
[factory-debuginfo]
name=Debug packages for Containers from Build Factory
mirrorlist=http://download.openvz.org/virtuozzo/mirrorlists/7.0/factory-debug.mirrorlist
#baseurl=http://download.openvz.org/virtuozzo/factory/x86_64/debug/
priority=49
enabled=0
gpgcheck=0
gpgkey=file:///etc/pki/rpm-gpg/RPM-GPG-KEY-Virtuozzo-7
```

```
[virtuozzolinix-openvz-factory]
name=VirtuozzoLinux Factory
mirrorlist=http://repo.virtuozzo.com/vzlinux/mirrorlist/mirrors-7-factory
#baseurl=http://repo.virtuozzo.com/vzlinux/7/$basearch/factory/
priority=90
enabled=1
gpgcheck=1
```

```
gpgkey=file:///etc/pki/rpm-gpg/VZLINUX_GPG_KEY
```

```
[virtuozzolinix-openvz-factory-debuginfo]
name=VirtuozzoLinux Factory debug packages
mirrorlist=http://repo.virtuozzo.com/vzlinux/mirrorlist/mirrors-7-factory-debug
#baseurl=http://repo.virtuozzo.com/vzlinux/7/$basearch/factory-debug/
priority=90
enabled=0
gpgcheck=1
gpgkey=file:///etc/pki/rpm-gpg/VZLINUX_GPG_KEY
```

Disabled it with:

```
yum-config-manager --disable factory
yum-config-manager --disable virtuozzolinix-openvz-factory
```

Are components broken down in the past period? What is the impact for machines with the factory updates?

All my installations were set up in this way.

Factory repo is still enabled in https://download.openvz.org/virtuozzo/releases/7.0/x86_64/iso/openvz-iso-7.0.7-361.iso

Be careful and disable the 'factory' repo!

```
yum-config-manager --disable factory
yum-config-manager --disable virtuozzolinix-openvz-factory
```

Yes, you're right, factory repo is still enabled by default in last published openvz ISO. I've pushed developers, but did not checked it by myself before last update and was misinformed by collegians.

I've escalated this problem again and hope it helps this time.
