Hello again, i still with troubles migrating to openvz 7, now i can create containers using the ubuntu template; im receiving this;

```
[root@vps2 conf]# prctl create ar1.wind.com --vmtype ct --ostemplate ubuntu-16.04
Creating the Container...
Creating cache
Processing metadata for ubuntu-16.04-x86_64
Failed to register the CT: PRL_ERR_VZCTL_OPERATION_FAILED (Details: Creating OS
template cache for ubuntu-16.04 template
Error: Error: Got signal 11
Creation of Container private area failed
)
Failed to create the virtual machine.
```

But its work fine i use centos7 instead;

```
[root@vps2 conf]# prctl create ar1.wind.com --vmtype ct --ostemplate centos-7-x86_64
Creating the Container...
The Container has been successfully created.
[root@vps2 conf]#
```

This happend with all debian base distribution, other release of ubuntu or debian8 template;

here is the output of vzpkg list;

```
[root@vps2 private]# vzpkg list
ubuntu-14.04-x86_64

kernel: 3.10.0-693.21.1.vz7.50.16

What can be wrong ?

Thanks!

Please try to execute `vzpkg create cache ubuntu-16.04`,
it generates detailed output and can help to explain the reason of the trouble.
Also it makes sense to update kernel (and other vz-related packages too) -- your current
vz7.50.16 is quite old.

Thank you,
Vasily Averin

Hello Vasily, thanks a lot for your answer;

I already did an update of the vzctl environment ;

```
# uname -a  
Linux vps2.servidoraweb.net 3.10.0-862.20.2.vz7.73.25 #1 SMP Thu Dec 20 15:51:48 MSK  
2018 x86_64 x86_64 x86_64 GNU/Linux
```

```
# vzctl --version  
vzctl v.7.0.193-1.vz7
```

Anyway the problem remains there;

```
# vzpkg create cache ubuntu-16.04  
Creating OS template cache for ubuntu-16.04 template  
Error: Error: Got signal 11
```

Damn!

I would note that you use binaries from 'factory' repo.
you can try to switch to stable branch, this may help.

Please re-install ubuntu-16.04.ez tempalte rpm, to be sure that original files was not modified.

There is /var/log/vztt.log log file, but I afraid it can be useless here.
You can execute vzpkg with debug (-d key) -- however according to developers
it usually helps to troubleshoot the problem related to installation of the packets.

Please search core dump of failed vzpkg,
or at least execute vzpkg under strace.

If nothing helps, please provide exact version of vztt and submit new bug on
<https://bugs.openvz.org>

Thank you,
Vasily Averin

Hello , due i've change the repo and tried with the originals rpm. Have no changes, i opened a
ticket bug to openvz.

<https://bugs.openvz.org/browse/OVZ-7078>

Thanks!
