I failed to update OpenVZ 7, as some yum repository links to repo.virtuozzo.com ...

However, the domain - virtuozzo.com - was expired on 2019-06-18 !?
(I hope it is because someone forget to renew it la..)

The domain - openvz.org - will expire on 2019-08-07

Yep, fixed already, some issues with autorenew,
and whois database to be updated a bit later i suppose.

https://www.whois.com/whois/virtuozzo.com

Updated Date: 2019-06-21T01:10:54Z
>>> Last update of WHOIS database: 2019-06-20T21:45:31Z <<<

Hope autorenew for openvz.org won't glitch.

Anyone else still experiencing issues with repo.virtuozzo.com? Yum is not enjoying it:

 One of the configured repositories failed (Unknown),
 and yum doesn't have enough cached data to continue. At this point the only
 safe thing yum can do is fail

Appears to be fixed now; must have just taken a while to propagate.
