Hello,

I am going to change my vps server machine, and do a fresh install. I was thinking about upgrading from (existing) OpenVZ 6 on Centos 6 into OpenVZ 7 on Centos 7, but what i am worried about is the pre created os template availability. As far as i do googling i only found https://openvz.org/Download/template/precreated for OpenVZ 6

Is anybody know where i can get the precreated os template for OpenVZ 7, actually what i need is just Centos and Ubuntu OS for my clients container.

and for the vps management i use solusvm

Thank You
