As the subject states, we just noticed a new kernel was released and updated/rebooted a few of our non-production hosts. They all have the same issue when attempting to start a container. You can't start a container and get this error:

```
Failed to start the CT: PRL_ERR_VZCTL_OPERATION_FAILED (Details: vcmmd: failed to register Container: Failed to get VCMMD D-Bus name
vcmmd: failed to unregister Container: Failed to get VCMMD D-Bus name
vcmmd: failed to unregister Container: Failed to get VCMMD D-Bus name
Failed to start the Container
)
```

I noticed that vcmmd.service is stuck "activating", and looking at the vcmmd.log it's failing with this:

```
2024-01-25 09:30:26 INFO vcmmd: Started
2024-01-25 09:30:26 INFO vcmmd.config: Loading config from file '/etc/vz/vcmmd.conf'

Is anyone else running into this? I have the same issue on all 4 hosts that I updated yesterday.

Thanks!,

FYI, these were the packages installed yesterday before the system(s) broke:

Packages Altered:

Updated	crit-3.18.0.26-1.vz7.x86_64	@openvz-updates
Update	3.18.1.1-1.vz7.x86_64	@openvz-os
Updated	criu-3.18.0.26-1.vz7.x86_64	@openvz-updates
Update	3.18.1.1-1.vz7.x86_64	@openvz-os
Updated	kernel-tools-3.10.0-1160.90.1.vz7.200.7.x86_64	@openvz-os
Update	3.10.0-1160.105.1.vz7.214.3.x86_64	@openvz-os
Updated	kernel-tools-libs-3.10.0-1160.90.1.vz7.200.7.x86_64	@openvz-os
Update	3.10.0-1160.105.1.vz7.214.3.x86_64	@openvz-os
Updated	libguestfs-1:1.40.2-10.vz7.1.x86_64	@openvz-os
Update	1:1.40.2-10.vz7.2.x86_64	@openvz-os
Updated	libguestfs-appliance-1:1.40.2-10.vz7.1.x86_64	@openvz-os
Update	1:1.40.2-10.vz7.2.x86_64	@openvz-os
Updated	libguestfs-tools-1:1.40.2-10.vz7.1.noarch	@openvz-os
Update	1:1.40.2-10.vz7.2.noarch	@openvz-os
Updated	libguestfs-tools-c-1:1.40.2-10.vz7.1.x86_64	@openvz-os
Update	1:1.40.2-10.vz7.2.x86_64	@openvz-os
Updated	libprlsdk-7.0.299.1-1.vz7.x86_64	@openvz-updates
Update	7.0.301-1.vz7.x86_64	@openvz-os
Updated	libprlsdk-python-7.0.299.1-1.vz7.x86_64	@openvz-updates
Update	7.0.301-1.vz7.x86_64	@openvz-os
Updated	libprlxmodel-7.0.101.1-1.vz7.x86_64	@openvz-updates

Update	7.1.5-1.vz7.x86_64	@openvz-os

This same host was previously yum updated on Jan 19th, was on the "3.10.0-1160.90.1.vz7.200.7 #1 SMP Wed Jul 12" kernel and was working as expected, so it was definitely something in the latest update that broke things.

Update: I did revert the kernel, and that's not it, at least not on it's own. The issue persists even after the kernel revert/reboot of the host, so I'm assuming it might have been the vcmmmd service update, so I'm trying to see if I can manually downgrade that next.

Another update:

It would appear that the issue is this package causing the issue:

vcmmmd.noarch 8.0.88-1.vz7 @openvz-os

I removed vcmmd.noarch (which of course removes a ton of dependencies that I had to manually re-install after), and replaced it with the package from the older release:
https://download.openvz.org/virtuozzo/releases/openvz-7.0.20-147/x86_64

vcmmd.noarch 8.0.77-1.vz7 @/vcmmd-8.0.77-1.vz7.noarch

And now the vcmmd service starts fine, and I've been able to get a container to run on the host, everything seemingly working now. However, there was a huge chain of dependencies that I went through and manually re-installed, and this fix was super "hacky". I'd do it on a production server in a pinch if I had to, but wouldn't feel comfortable running production VPS's on it, so I'm hoping we get an official fix soon.

This does shine some light on where the issue is with the latest release, so hopefully some devs will see this and patch the latest release ASAP. I have 4 hosts that I've updated to the latest release, and this issue has happened on each one of them.

Seems to be a real oversight here. Hopefully it will get fixed asap.

The only remedy was to roll back to the previous last good version of "vcmmd":

```
rpm -hUv --force https://download.openvz.org/virtuozzo/releases/openvz-7.0.20-147/x86\_64/os/Packages/v/vcmmd-8.0.77-1.vz7.noarch.rpm
```

You should report at:
<https://bugs.openvz.org/>

We have reported some bugs and the fix didn't take long.

Looks like it was already reported as a bug on the 17th here:
<https://bugs.openvz.org/browse/OVZ-7486> with subject "vcmmmd: failed to register Container:
Failed to get VCMMD D-Bus name"

No comments or updates from devs yet. Good thing there's a workaround.

Edit: I see there's a duplicate report here that has received attention from devs:
<https://bugs.openvz.org/browse/OVZ-7488>

Subject: Re: Oviz7 issues with latest updates/kernel: 3.10.0-1160.105.1.vz7.214.3

I ran into this bug as well; I reverted the vcmmmd pkg to vcmmmd-8.0.77-1.vz7 on all of my nodes and this fixed the issue I was seeing:

```
rpm -ev --nodeps vcmmmd
wget
http://ftp.tudelft.nl/OpenVZ/virtuozzo/releases/openvz-7.0.20-147/x86_64/os/Packages/v/vcmmmd-8
.0.77-1.vz7.noarch.rpm
rpm -iv vcmmmd-8.0.77-1.vz7.noarch.rpm
systemctl restart vcmmmd
```

The issue is that I forgot to disable yum-cron update for this package on the node where I first had the problem, and it ended up re-updating vcmmmd automatically. I once again reverted the vcmmmd package but now I have a slightly different error; instead of refusing to start at all, it starts to parse the configs so I hope it's just a bad configuration file in this instance, and that's the avenue I am currently debugging.

Here's my log from the issue I am seeing now; having already reverted my vcmmmd package(which has fixed the problem in all other cases for me).

```

I really appreciate everyone's feedback here. It sounds like others have found and are using the same "fix", rolling back vcmmd to the package from the previous release.

Hoping we get an official fix soon, so I can finish updating my production machines. I'll keep an eye on those bug tickets.

Numington, did you get your issue figured out? These errors are the same I was seeing when running the newer VCCMD, and were fixed when I rolled back:

```
2024-01-27 16:20:11 ERROR vcmmd.host: <snipped>.net: Memory cgroup vstorage.slice does
not exist
2024-01-27 16:20:11 ERROR vcmmd.ldmgr: Failed to load policy "density": Policy not found
```

So even though your vcmmd version shows the older version, I suspect something from the newer version is still in place somehow.

Andd it's fixed! It looks like they updated the newer version of vcmmd, and didn't roll back to the older version as a "fix", so that's good at least.
