Subject: host fs is too fragmented Posted by wsap on Wed, 20 Mar 2024 18:42:45 GMT View Forum Message <> Reply to Message

Has anyone spotted this on an OpenVZ 7 host node messages log?

Mar 20 15:14:43 sr04 kernel: host fs is too fragmented: average extent size is lesser than 2233949 bytes Mar 20 15:14:43 sr04 kernel: Purging Iru entry from extent tree for inode 145489924 (map size=321945 ratio=31%)

Seems to be indicating the disks on the node need defragmentation, however I've always understood it that SSDs don't require defragmentation.
