

Howdy! We're in need of an Ubuntu 24 template for our Openvz7 platform and have noticed that just recently one was added to the repo:

<https://bitbucket.org/openvz/workspace/repositories/?project=%7Bcbd97edc-f022-4b9a-bb41-a9da0fd13e90%7D&page=1>

However, it's not available on any of our Openvz7 hosts:

```

Does anyone know if and when this might be released officially for Openvz7?

Thanks!,

Update 22 dropped a few days ago and it has this template in it:
https://download.openvz.org/virtuoxxo/releases/openvz-7.0.22-123/x86_64/os/Packages/u/ubuntu-24.04-x86_64-ez-7.0.0-9.vz7.noarch.rpm

It also includes the libvzctl package change that fixes systemd losing track of system units upon daemon-reexec because of `init -z` (however containers must be restarted for it to apply).
