Hi!

Well Im from Colombia and all my clients are in Colombia. Then, here
people don't speak english.

I have cPanel running into VE, and my clients need the squirrelmail and
horde in spanish. Then, cPanel support told me that I need the locales.

[root@genesis /]# vzctl enter 101
entered into VPS 101
-bash-3.00# locale -a
C
POSIX
[root@genesis /]#

I tried that kir suggested in ovz forums:
I edited /vz/template/fedora-core/4/i386/config/.rpmmacros and now I
have: %_install_langs C:es_CO:es:en_GB:en_US:en
And vzpkgcache -f fedora-core-4
I restart the VE, but the squirrelmail and horde does not work in spanish.

Sorry for the english

Whoops! Now you need to create a new VE, based on the cache you just
created.
