
Subject: Checkpointing does not work with bind mounts?

It appears that checkpointing a VE fails if there are any bind mounts between the host and the VE.
Here is what happens if I have
an NFS filesystem mounted on the host and bind-mounted to the VE:

```
host$ vzctl chkpnt 610
Setting up checkpoint...
suspend...
Can not suspend VE: Invalid argument
unsupported fs type nfs4
Checkpointing failed
```

Is there a way around this?

thanks,

Steve Gaarder

What kernel version do you use?

2.6.9-023stab032.1-smp on Red Hat Enterprise 4, x86_64.

thanks,

Steve

Sorry the late answer.
Did you get this problem solved?

I have created a little vzmount/vzumount program.
As it mounts the filesystem as simfs, it works with checkpointing.

Attached file.

```
gcc -o vzmount vzmount.c  
ln vzmount vzumount
```

```
./vzmount /source/dir /destination  
./vzumount /destination
```

Regards,
Kristian Høgh
