Hi!

I'm looking for a technical paper about OpenVZ's live migration.

I only know the wiki page of OpenVZ's live migration but that information is not really a technical one.

http://wiki.openvz.org/Checkpointing_and_live_migration

Thank you,
Christoph

What do you want to know?

"Checkpointing internals" wiki page is not ready yet, but it will be available soon.

yes, checkpointing internals would be great.
Any preview yet of this wiki page?

What I would be interested moreover is, if there is anything planned to further minimize the downtime (e.g. shared storage support, precopying memory state, ...)?

Christoph

Sorry, preview of this page is not available yet.

We plan to implement precopy of memory state and support of shared storages in live migration in OpenVZ later, but not right now.
