Hello,

There is any ETA of vzrpm43 & vzrpm44 release for x86_64?

```
[root@x2421 install]# vzyum 666 install yum
```

```
exec /usr/share/vzyum/bin/yum -c /vz/template/fedora-core/5/i386/config/yum.conf --installroot  
/vz/root/666 --vps=666 install yum
```

There was a problem importing one of the Python modules required to run yum. The error leading to this problem was:

```
/usr/share/vzpkgtools/vzrpm44/lib/python2.3/site-packages/rpm/_rpmmodule.so: cannot open  
shared object file: No such file or directory
```

Please install a package which provides this module, or verify that the module is installed correctly.

It's possible that the above module doesn't match the current version of Python, which is:

```
2.3.4 (#1, Oct 9 2006, 17:08:35)
```

```
[GCC 3.4.6 20060404 (Red Hat 3.4.6-3)]
```

If you cannot solve this problem yourself, please send this message to <yum@lists.linux.duke.edu>.

According to this topic

<http://forum.openvz.org/index.php?t=tree&th=1285&mid=7435&&rev=&reveal=>
you shouldn't use vzrpm/vzyum on 64bit nodes, rather use rpm/yum inside VEs.

BTW, bug is already filled: http://bugzilla.openvz.org/show_bug.cgi?id=72

[POST UPDATE]

Ohhh, I didn't understand you first, you already know about the problem and are interested in ETA... Well, I suppose kir will answer about it.

Sorry.
