---

I use HSPc and Virtuozzo in a production environment. I want to use OpenVZ for testing and (Virtuozzo) template creation purposes

I have read <http://openvz.org/documentation/tech/virtuozzo> but it doesn't cover my question.

- is there a (significant) difference in creating templates for OpenVz and Virtuozzo?
- are there any pitfalls I should know of?
- is there a better/faster way for creating vps templates?

Tnx
