OK. First let me say that I'm new to openvz. I've searched and searched for the answer to this but I can't find it.

I'm trying to get quota support within a vps. It seems to come down to that I can't get the simfs to mount with `usrquota,grpquota` options.

Here is my mtab in the vps:  
simfs / simfs rw 0 0  
proc /proc proc rw,nodiratime 0 0  
devpts /dev/pts devpts rw 0 0  
tmpfs /dev/shm tmpfs rw 0 0

Can anyone tell me where I set the option for this? I've even gone as far to try setting the options in the boot scripts of the vps and it just ignored them.

[http://forum.openvz.org/index.php?t=msg&th=1295&#msg\\_7758](http://forum.openvz.org/index.php?t=msg&th=1295&#msg_7758)

This thread was no help because he already has the `usrquota,grpquota` options set at the beginning of the thread.

Well, I finally figured it out. The command I was missing was:  
`vzctl set 101 --quotauidlimit 100 --save`

Once I did this quota started working! Yay! I told you I was a newb. LOL.
