If I understood the changelogs correctly, I should be able to use NFS inside a VE on 2.6.18-028test003.1.

But how should one use it? Now my VE doesn't know of filesystem type nfs.

I guess I should at least set VE\_FEATURE\_NFS, but how to do it?

Current version of vzctl doesn't support NFS feature...

Are there any plans on implementing it?

Of course there are plans. I guess next vzctl version will content this functionality. When will be next vzctl version? => I don't know now.
