David,

Running stress tests on OpenVZ 2.6.18 sparc64 kernel we hit the following:

----- cut -----

```
[285401.094964] RESUMABLE ERROR: Reporting on cpu 0
[285401.626736] RESUMABLE ERROR: err_handle[410000000000c6f]

[285409.010870] l7: <start_kernel+0x294/0x300>
----- cut -----
```

it looks like the hardware reports some problem and
the most interesting field is err_attrs...

```
    u32      err_attrs;
#define SUN4V_ERR_ATTRS_PROCESSOR    0x00000001
#define SUN4V_ERR_ATTRS_MEMORY      0x00000002
#define SUN4V_ERR_ATTRS_PIO         0x00000004
#define SUN4V_ERR_ATTRS_INT_REGISTERS 0x00000008
#define SUN4V_ERR_ATTRS_FPU_REGISTERS 0x00000010
#define SUN4V_ERR_ATTRS_USER_MODE    0x01000000
#define SUN4V_ERR_ATTRS_PRIV_MODE    0x02000000
#define SUN4V_ERR_ATTRS_RES_QUEUE_FULL 0x80000000
```

.. which should explain what subsystem is faulty.
However, 2.6.18 kernel knows nothing about the value 0x20 :/
I also didn't find anything in available documentation about this.
Can you shed some light on this please?
A link to the doc or some hint would be very much appreciated.

Thanks,
Kirill

```

This is a power-off request, did someone push the power-off button
or give the power-off command from the System Controller console?

I should add proper support for this, this report is a good reminder
:-)

All resumable errors of type 0x4 are power-off requests.
Unfortunately these encodings are not in any of the publicly published
documents.

ahh, looks like this :)
one of our users reproduced an issue which causes both mainstream and
2.6.18 OVZ kernels to hang on sparc :/ will investigate...
probably he reset the box after the hang :)

> :-)
would be nice :@)

> All resumable errors of type 0x4 are power-off requests.

thanks a lot for the explanation!

Thanks,
Kirill

I tested the following patch and it worked fine for me on a T2000, let
me know if it works for you too:

commit 035f09edbbc921b9688a65ec58c0f49b822e605c
Author: David S. Miller <davem@sunset.davemloft.net>
Date: Wed Nov 29 21:16:21 2006 -0800

[SPARC64]: Run ctrl-alt-del action for sun4v powerdown request.

Signed-off-by: David S. Miller <davem@davemloft.net>
