I'm not able to see a Samba server (broadcast browsing) installed on a VE.

May be that a VE is not able to send/receive broadcasted packets?

Bya

Most probably, if you use venet networking.

Read these articles, they should help:

1) http://wiki.openvz.org/Differences_between_venet_and_veth

2) http://wiki.openvz.org/Virtual_Ethernet_device

--

Thanks,
Dmitry.

Yes I was using venet.

Now I have switched on a veth device but this it is still not able to broadcast.

Should i set some particular parameter in /proc/sys/net/ipv4/conf/vethx or some particular routing rule?

Thanks.
