Hi,

I'm using UnionFS together with VServer for some time, and I want to use UnionFS also with OpenVZ. But, sadly, UnionFS supports only kernels  $\geq$  2.6.9.

Are there OpenVZ-Versions  $\geq$  2.6.9 to experiment with?

It is not currently available, but in some time there will be OpenVZ based on more recent kernel (like, say, 2.6.14). I can not give you any estimations yet, it may be a month or a few months.

to tell the truth, 2.6.9 and 2.6.8 are too much the same in VFS area, so I don't foresee any problems here. Try to compile unionfs.

Hi!

Can you, please, describe future politic of new release openvz kernel?

Will you continue to update current 2.6.8 kernel, like you do it now?

I mean what about stability...

Thank you.

sure, 2.6.8 kernel will be supported for at least 1-2 years.  
at the same time more recent kernel will probably appear soon, but I would recommend to stick with 2.6.8 in production until we announce another stable kernel.

seems not to be that simple:

```
gs unionfs-20060108-0200 # make
```

```
*****
```

If you have questions about or problems building Unionfs, please read INSTALL.

```
*****
```

```
make -C /lib/modules/2.6.8-022stab050-smp/build
SUBDIRS=/root/lmeier/Software/UnionFS/unionfs-20060108-0200
FISTDEVMK=/root/lmeier/Software/UnionFS/unionfs-20060108-020 0/fistdev.mk modules

it's easy. in OpenVZ kernel we added one more argument to `vfs_permission()`, but since no UnionFS were there it was not patched by us.  
Just add one more argument to `vfs_permission(... , NULL)`

I made some modifications to unionfs to be compatible to kernel-2.6.8. First tests showed, that it is possible to use unionfs for unification of openvz-vps's now. I will do some more tests and then publish also the patches.

Just in case anyone is still looking for a solution, I have attached a patch for unionfs snapshot 20060423-1600 and openvz 026.007.

I've not tested it yet, it just gets unionfs to compile.

your help is very much appreciated!  
can you post the results then/some HOWTO on this?
