Subject: OpenVZ 2.6.18-ovz028test005.1 crashing on DELL PE 2950
Posted by Jan Tomasek on Fri, 01 Dec 2006 12:47:05 GMT

Hello,

I'm trying to run OpenVZ on my new DELL PE 2950, it has 8GB of RAM, 2x
Intel Xeon 5160 @ 3.00GHz. 1.1TB FS attached to internal Perc 5/i
adapter and 5.9TB FS from MD1000 attached to Perc 5/E. BIOS and Firmware
of both SAS controlers was updated to latest versions.

When I boot 2.6.18-ovz028test005.1 system goes down in crash in max
30minutes after starting intensive I/O operation (no matter on which
FS). Cuz it is completely dead and ops never manage to get to syslog I
make snapshot of screen from last two attempts:
 http://tomasek.cz/stuff/P1070595_small.JPG
 http://tomasek.cz/stuff/P1070597_small.JPG

With 2.6.16-026test017 is system working reliablly.

Is this enought for developers to fix this? Are they reading this list?

Best regards

Thanks,
Dmitry.

Hello Kirill,

> AFAIK, it was fixed in 2.6.18-028test007

I see only 2.6.18-ovz028test005.1 on web:
 http://openvz.org/download/kernel/devel/

Pavel Emelianov provided me patch, which fixes problem. My system is
with it now running for 7hours.

Thanks for info! I'm running on it and I can confirm issue I started
this thread is fixed.

Also problem with iptables was fixed.

Thanks. Good work! :)
