I am running SuSE 10.1 and attempted to install
kernel-smp-2.6.16.21_2_ve026test016-1.i586.rpm. I received the above error message during
the rpm -ivh kernel-smp-2.6.16.21_2_ve026test016-1.i586.rpm execution.

Does anyone have any idea what that means? I googled for the error, but nothing was found.

Jim.

What about usual OpenVZ kernels, I mean 023stab032.1 or 028test007?

Thanks,
Vasily.
