i am install cpanel but i have error

[root@host cpins]# sh latest
Creating directory installd
Verifying archive integrity...latest: /usr/bin/tr: /lib/ld-linux.so.2: bad ELF interpreter: No such file or directory
latest: fork: Cannot allocate memory
Error in checksums: is different from 945309407

plz help me

the solution are very simple
you must add more resource

try this your vps ID 102

vzctl set 102 --kmemsize 4827648 --save
then restart vps

cpanel error
cat: /boot/System.map*: No such file or directory
Fatal Error. Cannot Resolve cpanel.net. Please check /etc/resolv.conf

---

nano /etc/resolv.conf
check the ip and name server

note from your host machine you need add hostname
vzctl set vpid --hostname name.com --save
the vzctl restart
if you need my help i give direct help for 35.00 per hours
contact to me direct

[root@host home]# sh latest
Creating directory installd
Verifying archive integrity... All good.
Uncompressing cplyr1-cPanel.....
....
....
....
.....

```
      _____                 _
  ____|  _ \ __ _ _ __   ___| |
 / __| |_) / _` | '_ \ / _ \ |
| (__|  __/ (_| | | | |  __/ |
 \___|_|   \__,_|_| |_|\___|_|
```

Installer Version 10.6.0

cat: /boot/System.map*: No such file or directory
Your operating system's rpm update method (yum) was not able to locate the glibc package. This is an indication of an improper setup. You must correct this error before you can proceed.

almubark wrote on Mon, 11 December 2006 10:00[root@host /]# yum install -y glibc* perl*
-bash: yum: command not found

go to your node and execute this command.

vzyum VEID install yum gcc nano

Hope this helps

Quote:Can I do Cpanel as template as I setup it when I create VPS account at short time ?

Yes, this is what I do. Create a centos VE. Install Cpanel into it and apply and modifications, tweaks, security enhancements, configurations that you like. Then, stop the VE and create a tar.gz of the private directory like any other VE template and put it in /vz/template/cache

Then, you can create additional VEs using the same template and not need to install yum, cpanel, etc everytime. What a time saver!

Rick

cpanel download lot change
the par that teke long time will be this sample
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
make sure you have resource /proc/us* etc

make sure the network card download speed been setup correct
