When I login to the VE I run 'df -h' and the output is empty such as:

Here's an output from a few of my VEs:

VPS 200

Filesystem	Size	Used	Avail	Use%	Mounted on
simfs	1.0G	314M	711M	31%	/

VPS 201

Filesystem	Size	Used	Avail	Use%	Mounted on

VPS 202

Filesystem	Size	Used	Avail	Use%	Mounted on

VPS 203

Filesystem	Size	Used	Avail	Use%	Mounted on
simfs	4.8G	1.4G	3.4G	30%	/

That's the 'df -h' command. Notice 201 and 202 don't present anything.

Here's some more output:

```
[root@vz1 ~]# vzctl exec 200 mount
simfs on / type simfs (rw,noatime)
proc on /proc type proc (rw,nodiratime)
devpts on /dev/pts type devpts (rw)
```

```
[root@vz1 ~]# vzctl exec 204 mount
none on /dev/pts type devpts (rw)
```

Kind of odd. Anyone got any ideas?

Thanks,

Just a guess but try this from inside the VPS:

```
mount -t proc proc /proc
```

Also, did you do this:

```
ln -s /proc/mounts /etc/mtab
```

Good Luck!

Awesome, thanks

I actually ended up doing this:

```
vzctl exec 201 "cat /proc/mounts > /etc/mtab"
```

Then the disk came up in df.

Awesome

You can just link /etc/mtab to /proc/mounts to achieve the same

```
vzctl enter XXX
```

```
rm -f /etc/mtab
```

```
ln -s /proc/mounts /etc/mtab
```

Thanks!

It would be cool if we could find someone to do a FAQ on these types of technical things, maybe a

knowledgebase or something
