A few hours ago my node goes down and fschk has found some corrupt data which recovered, now when i try to start quota i get the following:

```
[root@vps1 140]# vzquota on 140 -f
vzquota : (warning) Incorrect quota shutdown for id 140, recalculating disk usage
vzquota : (error) quota check : lstat Pj¥*': No such file or directory
```

How can i sort this problem out?

Solved by re-installing vzquota, seems that it's damaged

I ran into this same problem and was receiving the following error:

```
[root@serverid]# vzctl start <veid>
Starting VPS ...
vzquota : (warning) Incorrect quota shutdown for id <veid>, recalculating disk usage
vzquota : (error) quota check : lstat `conf`: No such file or directory
vzquota on failed [1]
```

I fixed it by running the following:

```
[root@serverid]# vzquota off <veid>
vzquota : (error) Quota is not running for id <veid>
vzquota : (warning) Repairing quota: it was incorrectly marked as running for id <veid>
[root@serverid]# vzquota on <veid>
```

By turning the quota off and on for the account I was then able to start up the account with no problems.
