Hello,

I have hardware (QUAD PROCESSOR / 8GB RAM) and have 20 VMs.

If i create 1 VM witch CPANEL and restore backup of my sites in CPANEL, NODE have "Segmentation fault". This no permit access via SSH, create new vm, etc.

What solution for find cause of this error?

I use last stable version of kernel. VM use centos.

Hi, its not possible for anyone to help you with the information you have provided.

Quote:NODE have "Segmentation fault".
can you be more specific? What application is hitting seg fault? Can you provide strace?

Quote:This no permit access via SSH
access to HN or VE?

Quote:create new vm
provide build details, the command you are running, and strace of the build

Also:
+your kernel version
+your vzctl version

Hello,

My hardware é REDHAT ENTERPRISE 64 BITS.

My kernel is: 2.6.9-023stab037.3-smp

vzctl: vzctl version 3.0.11

I created VM, instaled CPANEL and restored accounts via backup. After aprox. 10 min, ssh of NODE no accessible. In ssh of NODE, inform:

```
[root@cluster daily]# w
Segmentation fault
```

This is only NODE. VMs is normal. If i reboot hardware, problem continue after start this VM (witch cpanel).

Hello,

can you please dmesg output after Segmentation fault?

Thanks!

This is problem? In dmesg.

```
EXT3-fs: sda2: orphan cleanup on readonly fs
ext3_orphan_cleanup: deleting unreferenced inode 26149013
ext3_orphan_cleanup: deleting unreferenced inode 26149012
ext3_orphan_cleanup: deleting unreferenced inode 26149009
ext3_orphan_cleanup: deleting unreferenced inode 852916
ext3_orphan_cleanup: deleting unreferenced inode 2151475
ext3_orphan_cleanup: deleting unreferenced inode 2151474
ext3_orphan_cleanup: deleting unreferenced inode 2151473
ext3_orphan_cleanup: deleting unreferenced inode 2151472
ext3_orphan_cleanup: deleting unreferenced inode 28770414
ext3_orphan_cleanup: deleting unreferenced inode 21905537
ext3_orphan_cleanup: deleting unreferenced inode 21905697
ext3_orphan_cleanup: deleting unreferenced inode 21905475
ext3_orphan_cleanup: deleting unreferenced inode 28770351
ext3_orphan_cleanup: deleting unreferenced inode 28770356
```

After Segmentation fault, no information is add in dmesg;
