I've been able to find this topic on 64bit support
http://forum.openvz.org/index.php?t=msg&th=1407&#msg _7880 but I;m wondering if its possible
to have a 64bit Centos HW node and run a 32 bit Centos VPS?

We've got a copy of avg antivirus network edition that refuses to install in a 64bit guest.

I'm thinking that maybe its not, due to the single kernel that is run being either 32bit or 64bit? I'm
very happy to wrong

There may be some incompatibilities in e.g. quota, but otherwise 32-bit VE should work fine on a
64-bit HN.

I'd like to know more about setting up 32bit guests on a 64bit host, how stable is it?

Any tips / pointers you may want to share on this?
