I'm trying to create a FC6 64 bit VE and not getting it to work. I did an install of FC6 and copied all the files over. Then I copied the /dev directory form a working VE and a few other tricks. But - I'm getting this error when I try to enter the VE.

Unable to open pty: Mo such file or directory

What does this mean?

Have you installed kernel from rpm or built it yourself?
In the second case post .config file please.
Also please post the output of the following comands
on HN after starting VE:

```
cat /proc/mounts  
ls /vz/root/<veid>/dev
```

Thank you.

You forgot about `cat /proc/mounts` output after VE start,
Thanks

oupps

```
[root@vz4 linux-2.6.18.old]# cat /proc/mounts
/dev/root / ext3 rw,data=ordered 0 0
/dev /dev tmpfs rw 0 0
/proc /proc proc rw 0 0
/sys /sys sysfs rw 0 0
/proc/bus/usb /proc/bus/usb usbfs rw 0 0
devpts /dev/pts devpts rw 0 0
/dev/sda1 /boot ext3 rw,data=ordered 0 0
tmpfs /dev/shm tmpfs rw 0 0
sunrpc /var/lib/nfs/rpc_pipefs rpc_pipefs rw 0 0
/dev/drbd1 /vz2 ext3 rw,data=ordered 0 0
/dev/drbd2 /vz3 ext3 rw,data=ordered 0 0
/dev/sda8 /backup ext3 rw,data=ordered 0 0
/vz3/private/133 /vz3/root/133 simfs rw 0 0
/dev/sda8 /vz3/root/133/backup ext3 rw,data=ordered 0 0
/proc /vz3/root/133/proc proc rw 0 0
none /vz3/root/133/dev/pts devpts rw 0 0
/vz3/private/133 /vz3/root/133/var/tmp simfs rw,nosuid,noexec 0 0
```

Hmmm... seems to be ok.

Then can you post also strace of `vzctl enter`?

(http://wiki.openvz.org/Stracing_a_program)

Thanks!

I'm not shure but i think it should be this bug that i've already reported and there is also a fix for that:

http://bugzilla.openvz.org/show_bug.cgi?id=398

Please read my post. I've had the same Problem and there is already a patch out there. If it isn't a new bug.

Which Kernel version do you use?

Seems, that disaster is right!
Do you use kernel older then 2.6.18-028test10?
If "yes", then move to the latest.

Thanks.

In my case the /proc directory is empty. Apparently it's not running something that it should at

startup to activate it. What should be in fstab?

How are the scripts in the /etc/vz/dists linking to the VE. I'm a little confused about how those scripts are run?

What kernel version do you use?
If not 2.6.18-028test010, then upgrade till it
and you'll be happy

Yes - I just installed the latest kernel. I think that problem is that some script that supposed to run before the VE starts isn't running.
