Subject: network card does not work properly with openvz kernel

Hi, I've compiled openvz kernel and booted it
(no openvz configurations made ,just an openvz patched kernel)
Now the problem is that the network card is half functioning
I see that hosts on the lan see the packets transmitted
by ty the NIC , by the NIC itself does not recieve any packets.
I've played with kernel configuration by disabling/changing
the (openvz ,NIC drivers,DMA engines) kernel configuration to no avail.

It's a gentoo system with linux-2.6.18-openvz-028.010
NIC :Intel Corporation PRO/1000 EB Network Connection with I/O Acceleration

Any ideas?
