Subject: Hardware reboot and database connection problems

Hi Guys,

I have a serious problem occurring on my VPS when there is a hardware
reboot (as opposed to individual VPS reboot).

My java application runs under Tomcat and connects to MySQL.

I have installed MySQL 5 and use this. Both tomcat and mysql are
installed under /usr/local/

When the hardware reboots, there are connectivity issues with my
database, the application seems unable to connect to MySQL under certain
circumstances, however the background thread that runs in my app CAN
connect, which leads to database synchronisation issues.

As a result I have to login via SSH and reboot the VE once the node has
booted.

What could be the root cause of this and what can be done to help.

Many Thanks
Paul

Paul,

make sure your VE doesn't expirience resource shortages
(check failcnt column in /proc/user_beancounters).

next, check that mysql is shutdown gracefully in VE.
For this you can check whether manual mysql and/or VE stop
before node reboot helps.

Thanks,
Kirill
