I has success in install VPS on FC6.
But when i enable SELinux it error.
I can't enable SELinux more
i had edit /etc/sysconfig/selinux and set enforcing but still can't.
Any body can tell me why?

Because OpenVZ kernel doesn't support it. You need to disable it in /etc/sysconfig/selinux.

As OpenVZ may be treated as another security model, it is required some work in order to make SELinux security model available in VEs and HN and doesn't break OpenVZ one. So, for now it is not supported.

so can i use mod user_dir in httpd?
Can u tell me? about public_html?
and squid proxy etc...Can we do it?

I think so.
Just disable selinux in /etc/selinux/config and reboot node.

thx,all ok
i done it
But what happen if we dont u SELinux?will our security be ok?

Should we have a new security policy for all
If u can pl give me some guide
