Hello!

I thought i had understand the output of vzmemcheck. But at the moment i believe - i don't...

Output:

vzmemcheck -A -v

Output values in Mbytes

veid	LowMem	LowMem	RAM	MemSwap	MemSwap	Alloc	Alloc	Alloc
	util	commit	util	util	commit	util	commit	limit
181	5.44	16.13	271.68	271.68	266.13	393.26	266.13	2016.13

So this VPS has a Commit of 266.13 - how can the VPS use 271.68 ?

Stefan
