why don't start postfix? memory in this vps many

```
$ cat /var/log/maillog
```

```
postfix/master[11752]: fatal: socket: Cannot allocate memory
```

As you can see, fail count for numothersock is more that zero, that means you should increase that parameter. Something like

vzctl set 253 --numothersock 120 --save
should do the trick.
