Hi,

I am trying to use snmp to monitor the individual virtual hosts. However, I can not seam to get any interface details out of snmp.

I am currently using cacti and net-snmp and setup a basic snmp.conf which works on other real hosts.

Any ideas?

Regards

Mark

We have been playing with this as well, I'm not sure how useful the interface information is though. It isn't going to give you IO stats as the venet0:x interfaces don't collect them. There are also some index issues with snmpd but rstory over at #net-snmp on freenode irc has a patch for that now I think.

Good Luck

Miles
