Hi

After some hours of working I have this line in user_beancounters.

```
privvmpages      81587   126708   131072   131072      24
```

But how can it be? the max held is smaller than both barrier and limit.

Regards Flemming

Hello,

Look, it easily can happen:

Suppose at the moment maxheld = 126708.

Then you run some process, which tries to allocate 4365 pages.

$126708 + 4365 = 131073$ pages > 131072 pages, so this allocation fails and we have a failcounter, but maxheld is still 126708 pages.

HTH,

Vasily.
