[View Forum Message](#) <> [Reply to Message](#)

part of error message:

```
Running depmod.  
Finding valid ramdisk creators.  
Using mkinitrd.yaird to build the ramdisk.  
yaird error: bad value in /boot/config-2.6.18-openvz-sparc64-smp:  
CONFIG_DEFCONFIG_LIST="/lib/modules/$UNAME_RELEASE/.config" (fatal)  
mkinitrd.yaird failed to create initrd image.  
Failed to create initrd image.  
dpkg: error processing linux-image-2.6.18-openvz-sparc64-smp (--install):  
subprocess post-installation script returned error exit status 9  
Errors were encountered while processing:  
linux-image-2.6.18-openvz-sparc64-smp
```

The HN is running ubuntu 6.0.6 , current kernel is 2.6.15-26-sparc64-smp

Any suggestion?

Sam Zhu

mmm, what exact command do you use to build/install and create initrd ramdisk?

```
have you done  
# make install  
before creating initrd?
```

Subject: Re: yaird error when apply debian kernel image on sparc machine.

[View Forum Message](#) <> [Reply to Message](#)

I first installed yaird deb package using dpkg command.
When installing yaird, there is a error message showed conflict with lvm2, lvm-common packages.
I removed these two lvm-related packages and got yaird installed.

Then I downloaded debian image from

http://download.openvz.org/kernel/debian/etch/linux-headers-2.6.18-openvz-sparc64-smp_028test007.1d1-1_sparc.deb and http://download.openvz.org/kernel/debian/etch/linux-image-2.6.18-openvz-sparc64-smp_028test007.1d1-1_sparc.deb . when using dpkg to install this kernel image. this is the part of the error message popped up.

Thanks.

Sam

Is it a 32bit server or 64bit server. You are using sparc64 .Please check the server configuration

Subject: Re: yaird error when apply debian kernel image on sparc machine.

[View Forum Message](#) <> [Reply to Message](#)

uname -m result: sparc64. It is a sunblade 1000 machine.
HN kernel version 2.6.15-26-sparc64-smp

so I think this is a 64 bit machine.

Sam

mmmm... is it possible to get an access to take a look? (via PM or email only!).

if not...

let's check what value has CONFIG_DEFCONFIG_LIST in your current kernel configuration. For this, find the corresponding /boot/config-<kernel-uname> file and check the parameter.

Subject: Re: yaird error when apply debian kernel image on sparc machine.
Posted by [zszhu](#) on Wed, 07 Feb 2007 19:22:22 GMT
[View Forum Message](#) <> [Reply to Message](#)

it is not defined in config file

```
`grep CONFIG_DEFCONFIG_LIST /boot/config-2.6.15-26-sparc64-smp` returns nothing.
```

```
but `grep CONFIG_DEFCONFIG_LIST /boot/config-2.6.18-openvz-sparc64-smp` returns  
CONFIG_DEFCONFIG_LIST="/lib/modules/$UNAME_RELEASE/.config"
```

2.6.18-openvz-sparc64-smp is that kernel image failed installation.

right now, under /lib/modules/, in both "2.6.15-26-sparc64-smp" and
"2.6.18-openvz-sparc64-smp" directories, no .config file exists.

"2.6.18-openvz-sparc64-smp" directories, no .config file exists.

maybe that's the problem :/ can you try to copy /boot/config-2.6.18-openvz-sparc64-smp to
/lib/modules/2.6.18-openvz-sparc64-smp/.config ?

if it doesn't help, can you try recompiling kernel yourself?

[View Forum Message](#) <> [Reply to Message](#)

I copied both .config-XXXXXX file from /boot to /lib/modules, under their corresponding

directories. Then I came back to `dpkg -i` that kernel image, same error.

To compile to kernel, I downloaded "kernel-patch-openssl (028test007.1d2)" and "linux-source-2.6.18 (2.6.18-7)" from packages.debian.org. when applied the patch, error message is

```
../kernel-patches/all/apply/openssl
START applying openssl patch (OpenVZ kernel patch for virtual server support)
Testing whether "OpenVZ kernel patch for virtual server support" patch for 2.6.18 applies (dry
run):
1 out of 7 hunks FAILED -- saving rejects to file mm/fremap.c.rej
5 out of 44 hunks FAILED -- saving rejects to file mm/memory.c.rej
1 out of 6 hunks FAILED -- saving rejects to file mm/mprotect.c.rej
6 out of 29 hunks FAILED -- saving rejects to file net/ipv4/netfilter/ip_tables.c.rej
1 out of 8 hunks FAILED -- saving rejects to file net/ipv6/udp.c.rej
"OpenVZ kernel patch for virtual server support" patch for 2.6.18 does not apply cleanly
```

And according to this post : <http://www.mail-archive.com/debian-bugs-dist@lists.debian.org/msg295307.html>

patch 028test007.1 should apply against 2.6.18-8 or
patch 028test006.1. should apply against 2.6.18-7

But I only have patch 028test007.1 and kernel 2.6.18-7. I could download neither patch 028test006.1 nor kernel 2.6.18-8 , from debian.org or kernel.org or openssl.org. What a dilemma.

Can you help me find the right kernel release or patch release, or kernel/ patch release that matches (release 2.6.x, x>=15 is ok, for SPARC64 of course) ?

Thanks

Sam

Uhh... I asked debian guys, but in case it doesn't matter for you, I can guide you through the process of distro-independant procedure (I'm not a debian user). Sure, I will post their answer to you here.

Check our wiki page on HOWTO build a kernel:
[http://wiki.openvz.org/Kernel_build#Rebuilding_kernel_from_s ources](http://wiki.openvz.org/Kernel_build#Rebuilding_kernel_from_sources)

[View Forum Message](#) <> [Reply to Message](#)

I read it carefully. I can download the kernel 2.6.16 from kernel.org, and the corresponding patch from openvz, but no *.config.ovz for SPARC64 available on openvz. I do not have a .config available.

I tried to use the old config for 2.6.15 instead, not working.
Can you find a *.config.ovz for SPARC64 on openvz.org?

Thanks.

Sam

[View Forum Message](#) <> [Reply to Message](#)

After patching the source please check the source directory ,there will be a directory named "configs/ " in which you can see the config files as follows,

ll /usr/src/linux-2.6.16/configs/

total 108

-rw-r--r-- 1 root root 36742 Dec 19 13:47 kernel-2.6.16-026test018-i686.config.ovz

-rw-r--r-- 1 root root 36736 Dec 19 13:47 kernel-2.6.16-026test018-i686-enterprise.config.ovz

-rw-r--r-- 1 root root 36804 Dec 19 13:47 kernel-2.6.16-026test018-i686-smp.config.ovz

Now copy this config to the parent source folder as .config

Subject: Re: yaird error when apply debian kernel image on sparc machine.

total 108

-rw-r--r-- 1 root root 36742 Dec 19 13:47 kernel-2.6.16-026test018-i686.config.ovz

-rw-r--r-- 1 root root 36736 Dec 19 13:47 kernel-2.6.16-026test018-i686-enterprise.config.ovz

-rw-r--r-- 1 root root 36804 Dec 19 13:47 kernel-2.6.16-026test018-i686-smp.config.ovz

Now copy this config to the parent source folder as .config

But, that is the config for i686, not for SPARC.

Anyway, I followed you, copied it instead of it is for i686, and did finish the "make menuconfig". then "make all" , error message like:

```
# make all
```

```
CHK include/linux/version.h
```

```
UPD include/linux/version.h
```

```
CC init/main.o
```

```
In file included from include/linux/fs.h:214,  
from include/linux/proc_fs.h:6,  
from init/main.c:17:
```

```
include/linux/dcache.h: In function adget:
include/linux/dcache.h:315: error: ub_dentry_on undeclared (first use in this function)
include/linux/dcache.h:315: error: (Each undeclared identifier is reported only once
include/linux/dcache.h:315: error: for each function it appears in.)
make[1]: *** [init/main.o] Error 1
make: *** [init] Error 2
```

Any suggestion?

Sam

Hi Sam Zhu,

you can get a valid OpenVZ sparc64 kernel-config file from your
linux-image-2.6.18-openvz-sparc64-smp_028test007.1d1-1_sparc .deb

```
copy it to your linux-kernel-tree
# cp /boot/config-2.6.18-openvz-sparc64-smp /usr/src/<openvz-kernel-tree>/.
```

```
Modify your config
# make menuconfig
```

and build new sparc64-kernel ...

Subject: Re: yaird error when apply debian kernel image on sparc machine.

[View Forum Message](#) <> [Reply to Message](#)

yes, I followed you, copied the one /boot/config-2.6.18-openvz-sparc64-smp , and did finish the "make menuconfig". then "make all" , same error message like:

```
# make all
CHK include/linux/version.h
UPD include/linux/version.h
CC init/main.o
In file included from include/linux/fs.h:214,
from include/linux/proc_fs.h:6,
from init/main.c:17:
include/linux/dcache.h: In function adget:
```

```
include/linux/dcache.h:315: error: 'ub_dentry_on' undeclared (first use in this function)
include/linux/dcache.h:315: error: (Each undeclared identifier is reported only once
include/linux/dcache.h:315: error: for each function it appears in.)
make[1]: *** [init/main.o] Error 1
make: *** [init] Error 2
```

seems some code error in dcache.h file, Any suggestion?

thanks

Sam

yes. just open .config file in any editor and make sure the following OVZ options have these values:

```
#
# OpenVZ
#
CONFIG_VE=y
CONFIG_VE_CALLS=m
CONFIG_VZ_GENCALLS=y
CONFIG_VE_NETDEV=m
CONFIG_VE_ETHDEV=m
CONFIG_VZ_DEV=m
CONFIG_VE_IPTABLES=y
CONFIG_VZ_WDOG=m

CONFIG_SIM_FS=m
CONFIG_VZ_QUOTA=m
# CONFIG_VZ_QUOTA_UNLOAD is not set
CONFIG_VZ_QUOTA_UGID=y

#
# User resources
#
CONFIG_USER_RESOURCE=y
CONFIG_USER_RSS_ACCOUNTING=y
# CONFIG_UBC_IO_ACCT is not set
CONFIG_USER_SWAP_ACCOUNTING=y
CONFIG_USER_RESOURCE_PROC=y
CONFIG_UBC_DEBUG=y
# CONFIG_UBC_DEBUG_IO is not set
```

```
# CONFIG_UBC_DEBUG_VMRSS is not set
CONFIG_UBC_DEBUG_KMEM=y
# CONFIG_UBC_KEEP_UNUSED is not set
# CONFIG_UBC_DEBUG_ITEMS is not set
# CONFIG_UBC_UNLIMITED is not set
```

after that issue make oldconfig and make again

Subject: Re: yaird error when apply debian kernel image on sparc machine.

dev wrote on Fri, 09 February 2007 03:33yes. just open .config file in any editor and make sure the following OVZ options have these values:

```
#
# OpenVZ
#
CONFIG_VE=y
CONFIG_VE_CALLS=m
CONFIG_VZ_GENCALLS=y
CONFIG_VE_NETDEV=m
CONFIG_VE_ETHDEV=m
CONFIG_VZ_DEV=m
CONFIG_VE_IPTABLES=y
CONFIG_VZ_WDOG=m

CONFIG_SIM_FS=m
CONFIG_VZ_QUOTA=m
# CONFIG_VZ_QUOTA_UNLOAD is not set
CONFIG_VZ_QUOTA_UGID=y

#
# User resources
#
CONFIG_USER_RESOURCE=y
CONFIG_USER_RSS_ACCOUNTING=y
# CONFIG_UBC_IO_ACCT is not set
CONFIG_USER_SWAP_ACCOUNTING=y
CONFIG_USER_RESOURCE_PROC=y
CONFIG_UBC_DEBUG=y
# CONFIG_UBC_DEBUG_IO is not set
# CONFIG_UBC_DEBUG_VMRSS is not set
CONFIG_UBC_DEBUG_KMEM=y
# CONFIG_UBC_KEEP_UNUSED is not set
```

```
# CONFIG_UBC_DEBUG_ITEMS is not set
# CONFIG_UBC_UNLIMITED is not set
```

after that issue make oldconfig and make again

Now the topic seems changed to "how to make a kernel for sparc debian".

I strictly followed your suggestion. briefly:

1: get the 2.6.16 source code and put it in /usr/src

2: get the 2.6.16 patch then apply it,

3: copy the .config from /boot/config-2.6.18-openvz-sparc64-smp,

it is similar to what you mentioned before, only CONFIG_UBC_DEBUG not defined.

then I `make oldconfig`, after which all of these parameters deleted from .config, only left ones are:

```
#grep -i CONFIG_vz .config
CONFIG_VZ_QUOTA=m
# CONFIG_VZ_QUOTA_UNLOAD is not set
CONFIG_VZ_QUOTA_UGID=y
```

Then the `make all` give out the same ugly error messages:

```
[!] CC      init/main.o
In file included from include/linux/sched.h:12,
                 from include/linux/module.h:10,
                 from init/main.c:16:
include/linux/jiffies.h: In function 'clock_t_to_jiffies':
include/linux/jiffies.h:397: warning: ISO C90 forbids mixed declarations and code
In file included from include/linux/fs.h:214,
                 from include/linux/proc_fs.h:6,
                 from init/main.c:17:
include/linux/dcache.h: In function 'dget':
include/linux/dcache.h:315: error: 'ub_dentry_on' undeclared (first use in this function)
include/linux/dcache.h:315: error: (Each undeclared identifier is reported only once
include/linux/dcache.h:315: error: for each function it appears in.)
make[1]: *** [init/main.o] Error 1
make: *** [init] Error 2[!]
```

help .

Sam

wait, I don't suggest you to take 2.6.16 kernel! 2.6.18!!!
2.6.16 never supported SPARC!

can you provide me login to your machine? I can make it quickly
we also provided sparc64 machine to debian-openvz maintainer, so I hope it will be fixed in official repository also.

we also provided sparc64 machine to debian-openvz maintainer, so I hope it will be fixed in official repository also.

Thanks. Can you just give me the link to download the

- 1: kernel source code
- 2: matching patch source code
- 3: matching .config file.

all these 3 should be matching. the ones I downloaded from openvz.org or kernel.org simply do not match.

From the links on that page <http://openvz.org/download/kernel/devel/>, I download the kernel patch
<http://download.openvz.org/kernel/devel/028test015.1/patches/patch-ovz028test015.1-combined.gz> and kernel source
[http://www.kernel.org/pub/linux/kernel/v2.6/linux-2.6.18.tar .bz2](http://www.kernel.org/pub/linux/kernel/v2.6/linux-2.6.18.tar.bz2)

after apply the patch using 'gzip -dc patch-ovz028test015.1-combined.gz |patch -p1'

I got error when 'make menuconfig'
error message:

.....
.....

scripts/kconfig/lxdialog/checklist.c:290: error: `KEY_LEFT` undeclared (first use in this

```
function)
scripts/kconfig/lxdialog/checklist.c:291: error: 'KEY_RIGHT' undeclared (first use in this
function)
make[2]: *** [scripts/kconfig/lxdialog/checklist.o] Error 1
make[1]: *** [menuconfig] Error 2
make: *** [menuconfig] Error 2
```

My machine is an sparc64 sunblade 1000.

Thanks.

wait -- it works, you need to install package lib64ncurses5-dev . hehe . This needs to be added in the documentation !!!

Hi

The issue reported is a bug in yaird.

It was fixed in version 0.0.12-15.

See the following links for more information:

<http://lists.aliases.debian.org/pipermail/yaird-devel/2006-June/000466.html>

<http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=375813>

It is a result of the -mm patch that is likely to have been incorporated into the kernel by now.

Regards,

// Ola
