Subject: error on login
Posted by jbravo on Mon, 12 Feb 2007 12:43:15 GMT

[root@sanson cpbackup]# vzctl enter 101
entered into VE 101
mesg: error: tty device is not owned by group `tty'
root@gedeon [/]#

root@gedeon [/]# ls -l /dev/tty
crw-rw-rw- 1 root tty 5, 0 Dec 15 2005 /dev/tty

Any idea? thanks for your help.

I have the same error :

[root@vz5 ~]# vzctl enter 133
entered into VE 133
mesg: error: tty device is not owned by group `tty'

root@virt3 [/]# ls -lrt /dev/tty
crw-rw-rw-   1 root   tty   5, 0 Feb 6 09:45 /dev/tty

You have to have either /dev/ttyp* /dev/ptyp* devices in your VE, or
/dev/ptmx and /dev/pts filesystem mounted, or both.

For more info, see
http://wiki.openvz.org/Physical_to_VE#.2Fdev_TTY_devices
http://wiki.openvz.org/Physical_to_VE#Can.27t_enter_VE

Perhaps the separate wiki article is needed for this case...

This does not looks like something specific to OpenVZ. Still, let me guess.

"tty device" here is not /dev/tty, but either /dev/ttyp* and /dev/ptyp*,
or some entry under /dev/pts.

"mesg" is a program to enable/disable receiving messages from other
users. It is probably called from one of user's login scripts
(/etc/bashrc, /etc/bash_login, /etc/profile or something like that, or
their ~/. analogs). This programs is _possibly_ SGID to group tty (run
'ls -l $(which mesg)' to check that), and tries to change the mode of
one or several above mentioned files. Since files doesn't belong to
group tty, mesg complains.

This problem is most probably the problem of a given distribution.

Regards,
Kir.

Mantelle, please disregard my previous reply, I misread your email.

See my answer to Jose.

Yes in effect , my error is in /etc/bashrc :

This line

mesg y

-> mesg: error: tty device is not owned by group `tty'

Regards
Mantelle johan

If you are curious, you can run strace on it (i.e. change 'mesg y' to
'strace -f -o /tmp/mesg-y-strace-out mesg y') and see what files it
tries to open etc.

Still, to me it looks like distro-specific problem. What distribution
are you using?
