---

I downloaded vzyum-2.4.0-11.noarch.rpm and tried to install it on my centos 4.2 86\_64 box, it complains with;

```
[root@services ~]# rpm -Uvh vzyum-2.4.0-11.noarch.rpm
```

```
warning: vzyum-2.4.0-11.noarch.rpm: V3 DSA signature: NOKEY, key ID a7a1d4b6
```

```
error: Failed dependencies:
```

```
    cElementTree.so is needed by vzyum-2.4.0-11.noarch
```

I have the necessary shared lib here;

```
root@services ~]# locate cElementTree.so
```

```
/usr/lib64/python2.3/site-packages/cElementTree.so
```

I also tried rebuilding with the src.rpm and it still does the same, then I tried rpmbuild --target x86\_64. All failed.

Any ideas ?

Bards.

This is a bug in vzyum.spec -- it should actually require cElementTree.so(64bit) if compiled for x86\_64.

For now, you can install the rpm with --nodeps option.

I'm not sure although that it will work right out of the box.

So should I change the spec file ?

For now, you can install the rpm with --nodeps option.

I'm not sure although that it will work right out of the box.

Are you saying it might not work even if I install with nodeps ?

Thanks for the quick response.

Right. So just try it

Right. So just try it

I just try it, result:

If I exec vzpkgcache, get error message:

```
# vzpkgcache
```

```
Creating cache for fedora-core-4-i386-default OS template
```

```
There was a problem importing one of the Python modules
```

```
required to run yum. The error leading to this problem was:
```

```
  /usr/share/vzpkgtools/vzrpm44/lib/python2.4/site-packages/rp m/_rpmmodule.so: cannot open
shared object file: No such file or directory
```

Please install a package which provides this module, or  
verify that the module is installed correctly.

It's possible that the above module doesn't match the  
current version of Python, which is:

```
2.4.1 (#1, May 16 2005, 15:15:14)
```

```
[GCC 4.0.0 20050512 (Red Hat 4.0.0-5)]
```

If you cannot solve this problem yourself, please send this message to <yum@lists.linux.duke.edu>.

ERROR: yum failed with 1 exit code

It looks like you haven't commented out setting PYTHONPATH in /usr/share/vzpkg/cache-os script.
