Hi,

is it possible to change visibility of proc-fs in VPS (in Linux-VServer there is a exclude list to set visibility of files in /proc in VPS)?

Thanx Jarda

Hello, at the moment there is only one way for this: modify kernel sources. :)

What would be the use case for this?

What I'm trying to say is that in OpenVz procs is virtualized which means that when you look under /proc in a VPS you only see the stuff relevant to this VPS. Why would you want to change the set of files you see in /proc?

Roman.
