Subject: *SOLVED* Etch Packages from debian.systs.org broken?
Posted by mihde on Wed, 14 Feb 2007 14:54:38 GMT

Hi there,

I hope Thorsten Schifferdecker or someone else reads this and can shed some light on this. I am using Debian Etch on AMD64 and added the debian.systs.org Sources to my apt sources list. (gpg key also added). However I cannot install the openvz Images:

Debian-pre40-64-minimal:~# apt-get install ovzkernel-2.6.18-smp
Reading package lists... Done
Building dependency tree... Done
Some packages could not be installed. This may mean that you have
requested an impossible situation or if you are using the unstable
distribution that some required packages have not yet been created
or been moved out of Incoming.

Since you only requested a single operation it is extremely likely that
the package is simply not installable and a bug report against
that package should be filed.
The following information may help to resolve the situation:

The following packages have unmet dependencies:
  ovzkernel-2.6.18-smp: Depends: linux-image-2.6.18-028test015.1+40-ovz-smp but it is not
installable
E: Broken packages

However I could not find a mailadress to contact Thorsten anywhere on debian.systs.org...

Regards
Maik

Hi Maik,

you are right, the etch_amd64 kernels still missing ... will be uploaded!

Thanks for Info!

Regards,
Thorsten

Hi Thorsten,

thank you for the quick reply and missing upload.

Regards
Maik
