I just installed openvz kernel on x86_64 - now it seems I cannot loopback mount an iso9660 filesystem, what am I doing wrong ?

[

```
root@machine] # mount -o loop centos4.2-cd1.x86_64.iso cd1
```

```
mount: fs type iso9660 not supported by kernel
```

any help would be appreciated.

Which kernel do you use?

It should be there.
