I just read the announcement[1], that VEs will now support NFS. Does that include serverside NFS within a VEs kernel or the "old" method of using a userspace daemon?

regards,  
Lars

NFS support in VE means, that the root of VE can now mount NFS filesystem. So a client side is virtualized. As concerns NFS-server support - still only user-space daemon can be used. Get more information at <http://wiki.openvz.org/NFS>

Vasily.
