Hello:

I'm an existing Virtuozzo customer, and I have paid many thousands of dollars over the years to SW-Soft for this product. How does the Open Source thing change your product strategy - the product looks like a 1-1 copy of your existing commercial offerings.

Jonathan,

OpenVZ is not the same as Virtuozzo, it is just a subset of it. You can find the description of the differences [here](#) or [here](#).

Basically, OpenVZ is for hackers, while Virtuozzo is for businesses.

Jonathan,

I would add to the reply from Kir (below) that:

- OpenVZ is released publicly as a separate project to create a community around VZ technologies, make the whole VZ project better and bring the customers even more higher quality product. So the whole strategy is aimed to provide better quality to the customers.
- OpenVZ is not the same and the differences are described e.g. on support page. Additionally, commercial VZ stability and usability is much higher also, it has releases and much better tested.

Kirill

Hey, thanks for both the replies...

So, what is the relationship between SW-Soft and OpenVirtuozzo? Like, for example, support? Is this the same team of people, or a different team of folks, or what? I'm thinking of adding OV to the product lineup (it's perfect for some of the implementations we are currently using some competing products for, and it would be great to leverage the same expertise accross both our OS and Comm channels), so I'm really curious about the support deal you guys laid out on the site. A six hour response time and three incedents a month is perfect for what I'm thinking of.

We are partners, and do intend to keep on working with the commercial side of the business. But it would be great to be able to lay the OV lineup underneath some of hosted services implementations (it's not a price point that makes sense for commercial Virtuozzo, but we're quite competent systems and application programmers, so it'd be pretty easy). Where does support come from, and how does it really compare? P (to remain anonymous for those who don't know) and his team, or some Open Source team, or someone else?

Yes, this is the same team of support engineers, for the version with paid support. If unpaid version is used the only support tool is this forum, mailing list and community.

SWsoft is the main contributor and maintainer of the OpenVZ project, and it seems that it would stay the same for a while, due to aggressive Virtuozzo roadmap and lots of dedicated resources involved on SWsoft side.

The pricing for supported OpenVZ, and commercial virtuozzo for specific scenarios is expected to be very close if not the same. We'll contact SWsoft's sales and get their answer posted here or directly to you.

Thanks for the replies.

I'll finish up my emails directly to support and offlist.

Jonathan
