oldvfsmnt->mnt_sb->s_flags & MS_NOUSER

+ * We traversed the tree upward and reached a root, but the given
+ * lookup terminal point wasn't encountered. It means either that the
+ * dentry is out of our scope or belongs to an abstract space like
+ * sock_mnt or pipe_mnt. Check for it.
+ *

- + * There are different options to check it.
- + * We may assume that any dentry tree is unreachable unless it's
- + * connected to `root` (defined as fs root of init aka child reaper)
- + * and expose all paths that are not connected to it.
- + * The other option is to allow exposing of known abstract spaces
- + * explicitly and hide the path information for other cases.
- + * This approach is more safe, let's take it. 2001/04/22 SAW
