I deleted my /proc/user_beancounters file

I thought it would be re-generated automatically, but it is not.
How do I recreate it?

/Fran

Where you did it?

ve0 or vps?

In vps I can't do it:
rm /proc/user_beancounters
rm: cannot remove `/proc/user_beancounters': Operation not permitted

And in ve0 too.

How could you do it? Very interesting...

As I knew - proc doesn't allowed things like that.

I don't remember where (veo/vps) I was when I did it (was a few weeks ago).
There is another user_beancounters file at
/var/named/run-root/proc/user_beancounters

shall I just try to do a link to it from /proc?

I'm on a CentOS VPS on OPenVZ

er.. you are right, I did not deleted the file   /proc/user_beancounters I deleted its content
so the file exists but is empty
I thought the content would be regenerated, but it is not.

Just do the following:

mount -t proc proc /proc

OK, just to let you know: rebooting the host server (veo) regenerated the /proc/user_beancounters
on the vps.
