Hi,

My VPS was having problems communicating with the outside world, so I did a 'service network restart

I got this error:

```
Mar 23 05:38:06 vz09 sysctl: error: unknown error 1 setting key 'kernel.sysrq'
Mar 23 05:38:06 vz09 sysctl: error: unknown error 1 setting key 'kernel.core_uses_pid'
```

```
[root@server ~]# uname -a
Linux server 2.6.9-023stab040.1-smp #1 SMP Tue Jan 16 00:54:22 MSK 2007 i686 athlon i386
GNU/Linux
```

```
[root@server ~]# vzctl --version
vzctl version 3.0.16
```

Thanks,

Ugo

Nevermind, it was an iptables issue on the host, I'll read on that.
