First, I wish to thank the contributor of VZDump, which looks like a fine utility. I am having a little trouble with it though. I am running OpenVZ on a Debian Etch machine with a 2.6.18 kernel. When I try to use VZDump it complains that it can not find the VPS I specified. Am I doing something wrong?

Thanks...

Hi,

this one of serveral known bugs, which are fixed in vzdump-0.2-2, so please update to vzdump (0.3-1).

Bye,
Thorsten Schifferdecker

Hi Jim,

I just uploaded a fixed version (0.4-1) to:

http://www.proxmox.com/cms_proxmox/en/technology/oss-software/openvz/

Please can you test if it works now?

Best Regards

Dietmar
