
Subject: ovzkernel-devel missing ub directory

I'm compiling a kernel module for 2.6.18-8.el5.028stab023.1 installed via yum (yum install ovzkernel ovzkernel-devel), and the compile is erring on a missing directory/file. I think the directory would be:

```
/usr/src/kernels/2.6.18-8.el5.028stab023.1-x86_64/include/ub
```

(doesn't exist in the -i686 tree either)

In /usr/src/kernels/2.6.18-8.el5.028stab023.1-x86_64/include/linux, this directory appears to be referenced by several things:

```
# grep -n 'ub/' *
dcache.h:12:#include <ub/ub_dcache.h>
hardirq.h:10:#include <ub/ub_task.h>
sched.h:92:#include <ub/ub_task.h>
skbuff.h:233:#include <ub/ub_sk.h>
skbuff.h:344:#include <ub/ub_net.h>
```

Any hints, or was this directory accidentally omitted in ovzkernel-devel?

-mike

BTW, I've filed this as http://bugzilla.openvz.org/show_bug.cgi?id=521

I fixed this in spec file.
See bug for details/patch.
And thanks for your report!

Kirill
